CLEANING THE DATASETS TO CREATE AN EFFICIENT MODEL

These are the results for the various datasets provided:

- We fetch the data
- We view the data
- View the various datatypes of the respected columns given in the dataset that is been loaded.
- Describe the information of the dataset that is fetched.
- Check the null values if present:
- If there are some null values in the number of Companies worked that are cleaned.
- After the correction there is no null values left and then it means data is cleaned and is ready.
